Reference A

A power unit disclosed by the reference A reduces the output voltage fluctuation of the power unit which is a power regulator, and stabilizes voltage to be fed to a load device. Therefore, the invention is not purposed for preventing an FET that forms the regulator from breaking down by heat.

By contrast, a stabilized DC power supply unit relating to the present invention restricts a wattage power of an output transistor, and thereby prevents the output transistor from breaking down by heat even if an input voltage fluctuates.

This Information Disclosure Statement is being filed more than three months after the U.S. filing date and after the mailing date of a Final Rejection or Notice of Allowance, but before payment of the Issue Fee.
